General Instructions:

1. The **No.** Column is for transferring the sequencing number from the marked-up drawing / specification.
2. The **Specification** column is for indicating the specification from the drawing / specification.
3. The **Tolerance** column is for indicating the tolerance from the drawing / specification.
4. The **Actual** column is for recording the actual result of measurement / inspection.
5. The **Measurement Method** column is for recording the method of measurement (i.e., CMM, Micrometer, Optical Comparator, etc…)
6. The **Acc \ Rej** column is for indicating whether the inspection revealed the characteristic was within tolerance (Accept) or not within tolerance (Reject). Check as appropriate.
7. This form is available as a printed document and may be filled out manually. An equivalent form may be substituted, but must contain all the information requested by this form (F4-06E). Electronic submission of completed information is preferred (rather than paper).
